

Developing partnerships to solve business challenges with software solutions

About us

KLOC is a modern, vibrant, software development company based in Berkshire. We specialise in building relationships with businesses such as MSPs and accountants to provide a full range of development services to their customers.

KLOC have years of experience building bespoke business systems, mobile apps and high-end websites backed by expert support. We develop solutions to help businesses whether they are looking to replace old technology, reduce risk, increase capacity or improve competitive advantage.

Our team includes developers, project managers and quality managers. We come from a range of backgrounds and industries, giving us comprehensive knowledge and experience to draw on in order to create the perfect solution. KLOC will match the high standards you have already set with your customers, delivering reliable and trustworthy software solutions and support services.

Introduce us with confidence – we will always support you with your clients and we never compete with your offerings.

Development services include

- Bespoke software solutions
- Enhanced e-commerce
- Custom mobile apps
- Website development
- Off-the-shelf software solutions

Benefits of working with KLOC

- Strengthen client relationships by extending the services you can offer
- Increase customer satisfaction and success
- Increase revenue through our referral scheme
- Access to a UK-based development resource without the overhead
- High-quality development services backed by expert support
- All projects overseen by a project manager and include a dedicated QA tester

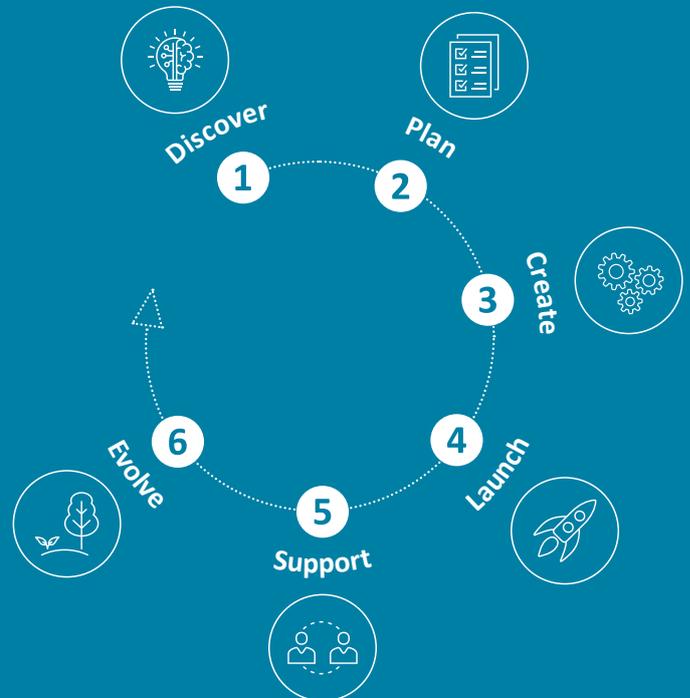

What we do

Our approach

We have used our knowledge and experience to develop a six-step approach that we follow on all projects. We involve the customer in all phases of the project and sign off each stage to make sure that they are completely happy with the final outcome.

We start all projects by working closely with the customer to understand all aspects of their requirements. We then build a detailed project plan containing all the information about the proposed solution and details of the project approach. From here we move on to the design and build of the solution. Once that has been signed off, we go through full testing procedures before working with our customers to launch the solution. We offer ongoing support and maintenance to ensure continued satisfaction. Finally, we remain on hand to help with the evolution of the solution over time.
